Objective

Full-Stack Developer and Systems Programmer (Java, TypeScript, Python). Experienced in building AI-integrated web apps and resource efficient CLI utilities. Seeking a Summer 2026 SWE Internship to solve complex engineering challenges.

Education

Lovely Professional University | B.Tech in Computer Science and Engineering | CGPA: 7.01 | Expected 2027
D.A.V Public School | Class 12 (73%) | Class 10 (93%) | 2020 – 2022

Technical Skills

Languages: TypeScript, JavaScript, Java, C++, Python, C

Web & Backend: React, Next.js, Node.js, Express, REST APIs, Tailwind

Database & Cloud: MongoDB, PostgreSQL, MySQL, Appwrite, Vercel

Tools & DevOps: Docker, Git, Linux (WSL), Maven

Core: Data Structures (DSA), OOP, Operating System

Projects

Blogging Platform | Next.js, TypeScript, Appwrite, Redux, Tailwind | [Live](#) | [GitHub](#)

- Architected a full-stack blogging platform using Next.js 15 App Router and Appwrite, implementing Hybrid ISR to pre-render top content while dynamically caching new posts.
- Developed a client-side canvas-based image compression engine, reducing upload payloads by 85% and decreasing storage costs/latency.
- Orchestrated an automated SEO pipeline featuring dynamic JSON-LD structured data, metadata generation, and auto-syncing sitemaps to maximize search engine discoverability.

AI Resume Builder | React, Node.js, Express, MongoDB, Google Gemini API | [GitHub](#)

- Built a full-stack platform with real-time editing and responsive UI using MERN stack.
- Leveraged Google Gemini API to provide AI-assisted content optimization for 40% higher content quality.
- Implemented a scalable data model in MongoDB to handle complex nested objects (experience, education, skills) with high retrieval efficiency.

Java-Shell (Linux Simulator) | Java, Maven, Docker, Design Patterns | [GitHub](#)

- Built a cross-platform CLI simulating Linux environments, programmed 40+ system-level commands for file I/O and networking.
- Architected system using Command and Registry patterns, improving code extensibility and maintainability.
- Reduced Docker image size to 250MB by utilizing multi-stage builds and minimizing dependencies.

Disk Usage Analyzer CLI | Python, OS APIs, Data Structures | [GitHub](#)

- Constructed a system-level utility for analyzing and ranking disk usage across directory structures.
- Engineered a memory-efficient scanning engine using Min-Heap priority queues for top N file tracking.
- Deployed permission-safe recursive traversal and real-time terminal UI with progress tracking.

Achievements

- **Competitive Programming:** Solved **200+ problems** across LeetCode, GFG, and HackerRank.
- **LeetCode:** Achieved a **1500+ contest rating**, placing in the top tier of active competitors.
- **HackerRank:** Attained a **5-Star rating in Python** and Gold Badges in Problem Solving.

Certifications

Cloud Computing ([NPTEL](#)), Master Generative AI & Tools ([Coursera](#)), Frontend Developer React ([HackerRank](#)), JavaScript Intermediate ([HackerRank](#))
